

# Nintendo Wii Wi-Fi Board Replacement

Written By: Dozuki System

# INTRODUCTION

Having Wi-Fi connectivity issues? Use this guide to replace your Wii's Wi-Fi board.

## TOOLS:

- [Metal Spudger](#) (1)
- [Phillips #00 Screwdriver](#) (1)
- [Spudger](#) (1)
- [Tri-wing Screwdriver](#) (1)
- [Tweezers](#) (1)

## PARTS:

- [Nintendo Wii Wi-Fi Board](#) (1)

## Step 1 — Nintendo Wii Wi-Fi Board Replacement

- Use a metal spudger to remove the white plastic screw covers stuck to the lower case near the front of the Wii.

## Step 2

- Remove the two 8.3 mm Tri-Wing screws hidden under the covers you just removed.

### Step 3

- Remove the single 5.9 mm Phillips screw under the controller port door nearest the faceplate.

### Step 4

- Use a metal spudger to remove the rubber foot stuck to the side of the Wii near the DVD drive opening.

## Step 5

- Remove the single 5.9 mm Phillips screw hidden under the foot you just removed.

## Step 6

- Carefully pull the faceplate away from the front of the Wii.
- Use a pair of tweezers to disconnect the LED cable's plastic connector from the motherboard.
- Remove the faceplate.

## Step 7

- Open the controller port cover until it is perpendicular to the black controller port bezel.
- Pull the controller port cover straight up to release it from the outer case.
- ❗ Repeat this procedure for the memory card port cover.

## Step 8

- Remove the two remaining 4.1 mm Phillips screws along the top edge of the black plastic controller port bezel.
- Lift the bezel from the long edge furthest away from the controller ports and remove it from the Wii.

## Step 9

- Remove the two 5 mm Phillips screws above the controller ports.

## Step 10

- Use a metal spudger to remove the three highlighted screw covers stuck to the side of the Wii.

## Step 11

- Remove the following screws:
  - Two 5 mm Phillips screws
  - One 8.2 mm Tri-Wing screw

## Step 12

- Use a metal spudger to remove the two rubber feet stuck to the bottom face of the Wii near the rear ports.

## Step 13

- Remove the two 8.2 mm Tri-Wing screws hidden under the feet you just removed.

## Step 14

- Lift the outer case straight up off the body of the Wii.

## Step 15

- Remove the small Phillips screw securing the battery door to the bottom panel.
- ⓘ This screw is captive to the battery door.
- Pull the battery door out of the Wii.
- ⓘ This is a good time to change the CR2032 battery if it hasn't been changed recently.

## Step 16

- Remove the 8.2 mm Tri-Wing screw that was hidden beneath the battery door.

## Step 17

- Remove the two 8.2 mm Tri-Wing screws securing the DVD drive shield near the controller ports.

## Step 18

- Lift the DVD drive shield upward and remove it from the Wii.

## Step 19

- Remove the four 9 mm Phillips screws securing the DVD drive to the bottom panel.

## Step 20

- Lift the side of the DVD drive opposite the controller ports enough to access the cables on its bottom face.
- Carefully pull the DVD drive power cable out from under the plastic shroud near the heat sink.

## Step 21

- Pull the DVD drive power cable away from its socket on the DVD drive.

## Step 22

- Use your fingernail to flip up the retaining flap on the DVD drive ribbon cable socket.

⚠ Be sure you are prying up on the retaining flap, **not** the socket itself.

- Pull the DVD drive ribbon cable out of its socket.
- Remove the DVD drive from the Wii.

## Step 23

- Use a pair of tweezers to lift the fan connector up and out of its socket on the logic board.

⚠ Be sure your tweezers are clamped down on the fan connector, **not** the socket on the motherboard.

## Step 24

- Remove the two 10 mm Phillips screws securing the fan to the fan shroud.
- Remove the fan from the Wii.

## Step 25

- Use the tip of a spudger or another fine-pointed tool to carefully pry one of the black plastic retaining fingers attached to the fan shroud away from the Wi-Fi antenna board.
- Lift the Wi-Fi antenna out of the fan shroud.

## Step 26

- Remove the single 10 mm Phillips screw securing the second Wi-Fi antenna to the top of the fan shroud.

## Step 27

- Remove the two pieces of tape securing the second Wi-Fi antenna cable to the plastic bracket near the heat sink.

## Step 28

- Carefully de-route both antennas from the frame of the Wii and lay them aside.

## Step 29

- Remove the three 10 mm Phillips screws securing the fan shroud to the Wii.
- Lift the fan shroud off the heat sink and remove it from the Wii.

## Step 30

- Remove the following six screws securing the EMI fingers to the bottom panel:
  - Four 7 mm Phillips screws
  - Two 11.3 mm Phillips screws
- Remove both sets of EMI fingers from the Wii.

## Step 31

- Remove the following three screws:
  - One 7 mm Phillips screw
  - Two 10 mm Phillips screws
- Lift the bracket out of the Wii.

## Step 32

- Remove the three 10 mm Phillips screws securing the black bracket to the bottom panel near the front of the Wii.
  - Slightly lift the bracket and use your other hand to pull the retaining clip away from where the Wi-Fi antennas enter the motherboard shield.
  - Remove the bracket from the Wii.
- i** Be sure not to lose the small square nut loosely held by the black plastic bracket.

## Step 33

- Remove the nine remaining 7 mm Phillips screws securing the motherboard cover to the bottom panel.

## Step 34

- Carefully lift the motherboard cover off the motherboard, minding any cables that may get caught.

## Step 35

- Lift the side of the Wi-Fi board furthest away from the heat sink and lift it out of its socket on the motherboard, being careful not to put too much sideways force on the connector.

## Step 36

- Use the flat end of a spudger to pry both antenna connectors off their sockets on the Wi-Fi board.

## Step 37

- Wi-Fi board remains.

To reassemble your device, follow these instructions in reverse order.
